FEATURES

Modular Design: Hood Depot's Utility Distribution System offers flexibility to expand or reconfigure your appliance layout without customary remodeling costs.

Safety: The UDS includes automatic shut-off devices for gas and electric appliances, electrical ground fault protection, safety rated steam fittings and state-of-the-art integrated fire suppression system pre-fabricated in an add-on cabinet.

Streamlining: Smooth contours, compact use of space and ease of cleaning are designed right into our UDS to make daily use and maintenance more convenient while minimizing recurring contractor work. Fabricated with all 304 stainless steel corrosion/tamper-resistant construction.

Operational Economy: Minimal connections and complexity reduces replacement parts, and provides significant savings for future retrofitting.

Expandability: All plumbing manifolds have multiple plumbing connectors for future use. Electrical systems are designed for additional appliances and is equipped with Busbar circuit system.

Hood Depot's superb UDS engineering incorporates every innovation currently available and then some: Tamper-proof fabrication technique, the newest quick-connect appliance fittings and service tower containing integrated fire system and power wash reel built-in!
