

Tailored engineering for every air quality application

Available in nearly every application and mounting situation (Right) and every level of purification demand. For appreciably less than the cost of an electrostatic purifier, the KAP removes up to 95% of grease, smoke and reduces odors.

Greater comfort for diners, more productivity for your staff

Hood Depot's Kitchen Air Purifier replaces the wasteful air handling methods of the past with today's superior cost/benefit air quality technology.

- Unique seamless, all-welded stainless steel construction
- Maximum efficiency airflow with combination staggered/stacked filter configuration
- Free standing, platform, roof mounted or suspended installation
- Full factory support and one year warranty

Clean Fresh Air

KAP Kitchen Air Purifier

Available Exclusively from

Your One Source for Solutions

How it Works

We use a two or three-stage progressive filtration and odor control system designed for the highest air quality at the lowest filter replacement costs.

Our first stage low-resistance media module captures micron and larger particles progressively with efficient, cost-effective filters in a straight-line configuration that extends the life of higher-cost, second stage filters. Available in two and three filter versions.

Second stage module uses activated carbon filtration to reduce sub-micron odor molecules and VOCs. Designed to distribute the airflow evenly across the filter surface (reducing static pressure loss), it avoids premature clogging at filter's center.

Belt-drive forward curved centrifugal downblast blower for efficiency and low sound level

For Today's Aggressive Business Environment

Both employees and those near your facility demand the same clean air quality that promotes better productivity and a better buying environment. Hood Depot's KAP effectively removes up to 95% of grease and smoke and reduce odors from restaurants, hotels, food courts, outdoor dining and office buildings-without the loss of costly cooler air by inefficient venting or air pressure imbalance.

For even greater grease & odor removal, our KES Electrostatic Precipitator removes up to 99% with less yearly maintenance!

Standard KAP Components

State-of-the-art filtration is achieved only with optimum airflow engineering and the most effective filter components available. Our kitchen air purifiers include:

- The industry's only seamless, water-tight all welded stainless steel construction
- Straight and staggered combination filter configurations for cost-saving extended use
- Unique channel-flow molded media filters
- Efficient activated-carbon extraction filters
- Modular design easily retrofitted to your exhaust system's duct and blower or available as complete system with our energy efficient blower and peripheral components
- Automatic fail-safe electrical operation
- Automatic notification for filter replacement
- Optional fire suppression system available integrated or separately wall mounted
- Complete compatibility with all cooking methods including barbecue, mesquite and other high-smoke applications
- Free standing, platform or roof mounted
- Full factory support and timely service
- One year comprehensive warranty

Backed by three decades of experience in design, fabrication and installation of ventilation equipment, we provide factory-backed support for you at every step. With timely turn-around and delivery anywhere in the U.S., our products meet or exceed all code requirements.

Don't let foul odor hit a foul ball for your profit! Hood Depot's KAP provides a healthy work environment for your team and your customers
